Work Offered

Work description:

Septentrio's test department has created a large amount of automated tests in different frameworks (xUnit, python unittest, Robot Framework ...). The scheduling of all these tests is done on a centralized server but the results are stored in multiple places. The purpose of this internship is to collect results from multiple tests system into a centralized database and to create a web-based reporting system to help developers getting an overview of all tests. The database interfacing will be SQL. The total effort is estimated between 3 to 6 months depending on student's previous knowledge.
